## Rawlplugs

### Description

The Rawlplug is a hollow tube of stiffened longitudinal strands of jute fibre so cemented that once in place it will not crumble or pulp, and is unaffected by moisture or change in temperature. It is placed in a previously drilled hole, smaller than the head of the screw and, therefore, invisible when in position. As the screw is turned home in the plug, the jute fibre strands expand and enter the interstices of the material, obtaining a strong and permanent grip. Screw cuts a perfect thread in the Rawlplug which permits withdrawing and reinserting the screw at any time in the orthodox manner.

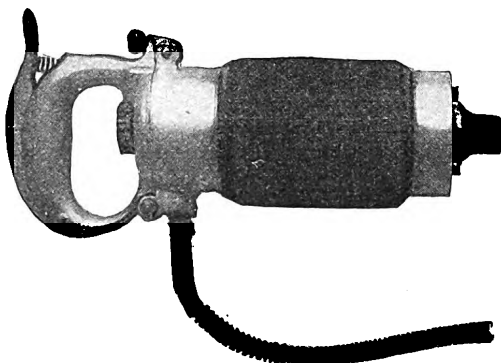

Rawldrills are made in sizes corresponding to every size Rawlplug and are of special alloy steel. The size of the drill should correspond to the size of Rawlplug used, resulting in a sliding fit.

For attaching bath room accessories No. 6x1 or 8x1 Rawlplugs should be used. No. 12x1 1/4-inch Rawlplugs are used for hanging closet tanks, sinks and lavatories.

The lag screw sizes of Rawlplugs are ideal for use with pipe hangers, or for mounting wall radiators, on any type of wall. They are particularly well adapted to hollow tile construction and it makes no difference whether the hole is made in the web of the tile or not.

All installations made with Rawlplugs, whether in hollow tile or other materials, can be readily taken down for repairs and replaced without new Rawlplugs.

Prices of Rawlplugs (Only) per 100  
 F. O. B. Nearest Branch

In ordering, specify number or diameter of screw and length of rawlplug. (Rawlplug need only be as long as threaded part of screw.)

Size of Rawlplug	Diameter of Drill Hole and Rawlplug	For use with Screw Number	Length of Rawlplug, Inches					
			1/4	3/8	1/2	3/4	1	1 1/4
			Packed 100 to a Box—					
2	1/4 inch	3-4-5	.95	1.00	1.05	1.10	1.15	1.20
